

SM211-EN Automic Administration Fundamentals

Kurzbeschreibung:

The administration of Automic Workload Automation contains two parts:

- the work on the physical machines and ...
- administration of the software itself.

More about this in the agenda. This is currently being carried out on the basis of V12.3.

Zielgruppe:

Part 1 (AWAEN): Automic administrators, operating system administrators, application-specific administrators, database administrators. Anyone who should know where the Automation Engine fits into their environment and how it interacts with the areas for which this group of people is responsible.

Part 2 (AWAEG): Automic Administrators - those who create user accounts and set up and provide templates, clients and other best practice procedures.

Voraussetzungen:

- SM905 Automic User Fundamentals

Sonstiges:

Dauer: 4 Tage

Preis: 2600 Euro plus Mwst.

Ziele:

Advanced trainings on request:

- AWA Engine Administrator
- Elective designed for AWA Administrators
- AWA Admin Expert Refresher & Exam

Inhalte/Agenda:

- ♦ **This course is based on the new Automic version v12.3.**
 - ♦ The first part provides a look at the machines with installation data. You will learn how the connections between machines work, how the configuration files are structured, and what permissions are necessary to keep your system running smoothly.
 - ♦ In the second part, you will deal with the settings and functions you need to create an efficient working environment for your users. The course focuses on system variables and settings, as well as permissions and access controls.
